BTB - Beat the Brakes | General Physics

Mean recorded travel distance by surface

Fixed ramp height: 25 cm | Three reported trials per surface

**All nine trials reached the road end before stopping naturally. Values are recorded travel distances, not valid natural stopping distances.**

Smooth: 1.000 m | Felt: 0.977 m | Sandpaper: 0.900 m

Bars summarize reported values only. All trials ended at the road limit; therefore the true stopping-distance comparison is inconclusive.
